

Main Classes - MVVM

In our project we used the MVVM architecture.

We will write the folders we have in the project and which classes in each folder

View

MainActivity , Joystick - These classes are responsible for the visibility that the user sees and every action that the user does these classes send this data to ViewModel.

ViewModel

MainViewModel - This class connect between the model and the view by a model field that it has.

Model

Model - This department is responsible for all the functionality of the project and you put the data back into the model.
